

# NET Core Developer

1. Setup .NET Core environment
2. Setup AngularJS on front-end side
3. Build a library system management that have below features:  
There are two roles of this system: admin & user  
Admin can create new library, upload document to a library.  
User can only upload document to one library created by admin
4. Model reference  
Library:
  - id: uuid
  - name: string
  - description: stringDocument:
  - id: uuid
  - name: string
  - file\_url: string
  - description: stringUser:
  - id: uuid
  - username: string
  - is\_admin: boolean
5. Notes
  - file can be uploaded to server or a file service (AWS, Azure)
  - The UI will followed bootstrap style
